

All we can promise you is suitable
solutions for your projects...
That's all!

www.eca-europe.com

Over 10 years working for industry has given us considerable hands-on experience "going with the flow". As a specialist in process fluids and industrial effluents, ECA has always been an open-minded responsive listener.

Each project is unique - that's why ECA will study, design and implement your industrial project giving weight to the human-contact aspect, the quality and durability of equipment, while taking into account technical, economic and statutory requirements.

Engineering

Process fluids & Industrial effluents

Engineering... we said it - that E word!

At ECA it's really a very simple word, as you'll see...

After a **serious preliminary study** (preferably by ECA!), you've chosen a solution.

Whatever technique you've chosen, whether traditional or leading-edge and high-tech, ECA will first study and validate your **project sizing** and **feasibility**, and then design your application as part of a complete **implementation dossier** :

- Procedure diagram PID
- Definition of equipment and associated materials
- Layouts
- Civil engineering work-guide drawings
- PIPework Layout, etc.

Our **in-house** mastery of leading-edge technologies ensures the control of equipment, including **supervision** and computerized **automation**, piloting by **remote programming** and **mobile maintenance** and much more. We do our utmost to make your installation... Easy to live with!

ECA is ever vigilant with the **critical phases**. Its **multi-business expertise** enables troubleshooting upstream to seek out possible problem zones so that fitting, start-up, reliability and fulfilment of guarantees are not subject to the hazards of rushed jobs.

Then comes the time for **supervision** and **on-site management**. Our fitting teams are part of a network of handpicked **sub-contractor partners** chosen for their conscientious approach and know-how.

Start up and **installation setting** are then simple formalities that we finish swiftly.

The ECA deal is completed by a detailed operating manual plus responsive **operational assistance**.

After all that... if you still don't understand that the E(ngineering) word is a synonymous with of total commitment to guaranteed results...

just give us a buzz on +33 (0)8 2082 0489 !

Because your industrial project is unique
